MADE IN FRANCE

## 58 years OF FRENCH-STYLE EXPERTISE

It has been in the shadow of Mont Blanc that Dynastar has constructed its history to become, over 50 years later, an exceptional brand and the only company of this size now producing skis that are “made in France”. Decade after decade, Dynastar skis have created a legend based on innovation and authenticity, carrying along in this unlimited passion all skiers seeking to fully embrace their love of skiing. From the very beginning, a close collaboration has existed between the brand and the athletes within the Dynastar family. These athletes are involved throughout the entire product design process, from the initial brief to marketing and on-snow tests.

Today, more than ever, Dynastar remains an expert in its craft. Mont Blanc has been a historic and enduring symbol of the sporting mountain spirit the pioneering founders so strongly infused in the brand. For this high-technology company, the Mont Blanc range and Chamonix represent a real-life test laboratory, a terrain of experiences, a source of inspiration, a base camp and a reference. With an innate belief in mountain values, Dynastar employees share the same passion and are united in a common goal: to create a unique snow feel, the Dynastar signature.

# FRENCH PRODUCTION IN THE HEART OF THE ALPS

Dynastar was created in 1963 in Sallanches, in the shadow of Mont-Blanc. Today, over 60% of production still takes place in the French factory in Sallanches, in the Chamonix Mont-Blanc Valley in the heart of the French Alps.

## PREPARATION OF COMPONENTS

Construction of a ski consists of three main steps: preparation of the different components, assembly (moulding) and then finishing to give the ski its skiability. Each component of the ski is therefore produced in a separate workshop from the raw materials before being sent for moulding.

The first task is bringing together all the components that will make up the ski:

### Base

The bases arrive in large rolls and are pre-cut in the shape of the ski. These components are then inserted in the space created by the operators.

### Edges

These are what will give the ski its grip and allow it to carve with absolute precision.

### Core

Some skis are produced with wood cores.

### Screen printing and topsheet

The topsheet is the final protective plastic layer on the top of a ski. Screen printing is the design you see on your tips when you are skiing. Screen printing is generally integrated in the topsheet using a varnish transfer process.

### Fibres

This is an essential element in the design of a ski. Different types of fibres are used: Glass fibre, Basalt fibre, Carbon fibre, etc.

## MOULDING

Moulding is the most important step: all components are assembled and the actual ski is created.

Once all the components are ready, the press closes and the timer starts. When the press opens, it contains three skis! The next stage is finishing, during which fibre shavings and other components are removed before the skis can be made "skiable".

INTRODUCTION

HISTORY

**FINISHING**

**Grinders and abrasive strips**  
Finishing consists of several stages. The ski leaves the press surrounded by debris, fibre shavings and resin, all of which need to be removed without damaging it.

The bulk of the work in the finishing stage involves using stone grinders to work on the roughness and sliding properties of the ski.

**QUALITY CONTROL**

After finishing, the skis are inspected and then sent to quality control.

**PAIRING AND HOT WAXING**

Our skis are almost ready, they now simply need to be paired, as they are produced individually, and then given a serial number.

AND BE rewarded!

Our best solution for a unique on-snow feeling: blending the performance of wood with the lightness and smooth snow feel of PU.

**WOOD = POWER AND AGILITY**

Wood is the best material to bring power and agility.

**PU = LIGHTNESS AND SMOOTH SNOW FEEL**

PU is a soft material that is used in many industries. Recognised for its light weight and damping properties, it ideally complements the properties of wood to deliver a smooth on-snow feeling.

*unique on-snow feeling*

**VARIOUS SOLUTIONS**  
*for unique thrills*

Exploring different species of wood enables us to give each product its own skiability.

**HYBRID CORE**  
**LIVES IN OUR DIFFERENT RANGES**  
*to deliver unique sensations*

**CARBON FIBRE**

The Formula 1 of fibres, guaranteeing superior skiability. A light weight and unbeatable mechanical rigidity properties. The carbon fibre offers breathtaking performance. The secret of Dynastar's ski mountaineering successes!

**FIBREGLASS**

The essential fibre. Glass filaments braided according to different weights to bring the ski a perfect balance of resistance, elasticity and dynamism.

**ROCKET FRAME TI**

An ingenious blend of power generated by the titanal and a specific geometry designed to lighten the ski. Guaranteed high level of Freeride performance for the M-PRO range.

**BASALT FIBRE**

(SECOND GENERATION)

Similar mechanical properties to fibreglass but with a reduced weight (-25%). It also offers absorption properties, to create the ideal reinforcement for Touring/Free Touring.

**VTECH**

Straight from the factory in Sallanches in the Mont Blanc Valley, this new technology is underpinned by reinforced arms to provide rigidity, power and torsional control over the body of the ski while freeing up the extremities. This allows the weight of the tip and tail to be reduced, resulting in a gain in both comfort and agility.

**FULL TITANAL LAYER**

2 full width/full length titanal layers on each side of the core mixed with our traditional sandwich construction. They provide excellent stability on turns and greatly reduce torsional effects on the ski. The base technology used mainly in Racing.

**POPLAR WOOD**

Traditional core with a density of 450 g/m<sup>3</sup>, offering an excellent balance of elasticity, resistance and weight.

**PAULOWNIA WOOD**

Core with a density of 300 g/m<sup>3</sup>, reducing the ski's weight by an average of 15 to 20% in comparison to a poplar core. Offering similar mechanical properties, it is an essential choice for Touring/Free Touring.

**ASH WOOD**

Core with a density of 730 g/m<sup>3</sup>, used for its resistance and elasticity properties on FIS and MASTER skis.

**BEECH WOOD**

Core with a density of 710 g/m<sup>3</sup>, increasingly used on FIS skis. It has very similar properties to Ash: hardness, elasticity, resistance.

**MICROCELL**

An extremely light foam core with a density of 100g/m<sup>3</sup>. Used in ski mountaineering for record weights or together with polyurethane to create lighter piste skis for women.

**POLYURETHANE**

(ACTIVE AIR CORE)

This new low-density polyurethane composition significantly reduces the weight of the ski (-50 g on piste skis in a size of 170). Used on its own or together with wood (Hybrid Core) to maximise lightness and product-specific performance, it provides exceptional comfort thanks to its ability to absorb vibrations.

# HUNT YOUR LINE

When the desire for freedom hiding deep within each of us resurfaces, it drives us instinctively to explore the mountains. It's almost animalistic and there's nothing we can do to resist. Naturally passionate, profoundly imprinted with creativity and commitment, everyone is looking for their own line. The perfect line: pure and unique. A subjective quest that belongs only to us and our own personal perception of the mountain. On the fringes of the crowd of skiers, it's time to invent your own path, one that no one else can see and depends only on you: become a line hunter. M-Line has designed its 4 ranges with this in mind: M FREE, M-PRO, M-TOUR and M-VERTICAL: a complete range of tailor-made tools to approach and feel the mountain in your own way.

## FREERIDE

The M-FREE range is meant for creative skiers searching for a playful, powerful and agile ski to help you get away from it all on virgin terrain and express your creativity with complete confidence. The result of a collaboration with the “talented Richard Permin”, it offers two progressive freeride models, including Hybrid Core technology, suitable here for powder snow, steep slopes and snowy forests... or even chalet roofs.

# FREERIDE

Dynastar continues to make freeride a part of its history: a legend that this winter is developing into M-PRO... making it even better. Freeride adventurers will have new weapons on their feet, with an instinct sure to turn heads on the powder. Incisive, fast and powerful, the M-PRO range and its Hybrid Core (Poplar/PU) complete with a Rocket Frame (Ti/Insert) will withstand high-speed curves and committed landings on any kind of snow...

## THE NEW M-TOUR RANGE

Because the excitement of the descent often goes hand in hand with hard work from your calves. Dynastar uses its recognised know-how in freeride touring with the legendary MYTHIC and presents the new M-TOUR range. Versatile by nature, the M-TOUR can be light uphill and sharp, grippy and precise when it comes to diving down the slopes. Explore, take a different path, find a shortcut... go beyond yourself.

# THE SHOOTING STAR

## A signature ski for our shooting star

Some chefs spend their entire career trying to win their first star. Clément Noël received his before he could even walk.

The new prodigy in French alpine skiing was racing down his first slopes, in his home region of the Vosges, at two and a half years of age. Since then, from Chamonix to Kitzbühel, from Wengen to Zagreb, he has shone on every occasion. Which is logical: shining is what stars do.

So to help him win the medal of his dreams on the slopes in Beijing, we have created a limited edition of the iconic OMEGLASS model. A ski for a champion, by a champion. With a signature decor celebrating these virtuoso chefs who inspire our connoisseur athlete. And a finish paying tribute to all the legends who have gone before him at Dynastar.

# PISTE

From the first turn to the last, from dawn to dusk, slope after slope, we can never get enough. Our body is working to generate energy and accelerate; our movements are coordinated and flowing... Turn after turn, from right to left and from top to bottom. All our senses are sharpened, we are striving for the perfect movement, the optimal flow. We feed on adrenaline. We carve each turn with determination and are obsessed by speed. We apply the same demanding standards to both ourselves and our equipment: we set our sights high.  
**Feed your speed**

# FREERIDE WOMEN

Wide, maneuverable and stable, the women's Dynastar E Pro 99 is for adventurous skiers with an affinity for speed. Its progressive twin rocker shape keeps it playful for a creative approach to natural terrain features. Its Hybrid Core adds titanal for precise control and a solid ride that holds up to high-speed arcs.

### SKIN E-TOUR 86

**DOLW107**  
**Size** [152-160-167]

# TOURING WOMEN

The E-TOUR 90 is designed to be light on ascents without ever compromising on its amazing downhill skiability. Thanks to its Hybrid Core technology, the heart of this ski conceals a core combining the lightness of Paulownia wood with the flexibility of PU, as well as a touch of power with basalt fibres. This makes the E-TOUR 90 the perfect ally for all keen women free-tourers seeking lightness and comfort on ascents while enjoying absolute downhill skiability.

JUNIOR  
BABY KIDS TEENS

# JUNIOR BABY-KIDS-TEENS

Kids have not been left out at Dynastar, with a range of skis designed to accompany them as their proficiency increases. From beginner to competition level, they will get a kick on the pistes with the TEAM series. Dynastar's MENACE range offers tailored performance and skiability for intermediate to good girl and boy skiers, paving the way for amazing all-terrain days for the whole family.

# POLES

For more than 50 years, Kerma has been developing increasingly light and rugged poles to meet the needs of all skiers. Kerma poles will help you up your game while giving expert skiers the ultimate in precision. Kerma is back this year with a range of poles combining performance, comfort and lightness.

## TELESCOPIC

This intuitive and efficient adjustment system allows you to adjust the size of the pole to your chosen discipline and different snow conditions. Ideal for climbs and downhill sections in freeriding as well as for younger skiers who grow from one season to the next.

## ROTATIONAL BASKET

Our rotating basket is aimed at all ski touring and freeride touring enthusiasts who dream of new summits and pristine powder fields. Its ball-joint construction, 32° rotation and excellent flexibility make it truly adaptable for hugging irregularities in the terrain. Guaranteed comfort, safety and stability for freeriders on both climbs and downhill sections.

## SAFETY GRIP

The series of poles with the Safety Grip technology provides a new solution to allow skiers to quickly and easily release their hands from their poles in the event of a fall, an avalanche or if a pole becomes wedged between rocks. The system is designed for use in emergencies or risk situations, to bring skiers comfort and safety in all conditions. A sharp down and up movement is all that is required to release the safety grip from the handle.

BACK PACKS

The Dynastar range of technical backpacks is specially designed to reduce bulk as far as possible and mould to the shape of the wearer's back for enhanced comfort. Each backpack in the range has specific features tailored to the requirements of different disciplines. You can find the perfect model for you, whether you need to carry straps, an ice axe, a hydration pack or anything else.

**1** **DKJB300**  
**M-35 LIGHT**  
Capacity/Volume 35 L  
Size L320 x W210 x H620 mm  
Weight 0.87 KG

**2** **DKJB301**  
**M-22 LIGHT**  
Capacity/Volume 22 L  
Size L300 x W200 x H500 mm  
Weight 0.74 KG

F-TEAM BAGS

**DKKB100**  
**F-TEAM CARGO BAG**  
Capacity/Volume 130 L  
Size L810 x W410 x H400 mm  
Weight 5.90 KG

**1** **DKKB101**  
**F-TEAM CABIN BAG**  
Capacity/Volume 50 L  
Size L520 x W320 x H300 mm  
Weight 2.90 KG

**2** **DKKB103**  
**F-TEAM EXTENDABLE 2 PAIRS PADDED 160/210 CM**  
Capacity/Volume 2 PAIRS  
Size L1600-2100 x W220 x H220 mm  
Weight 1.40 KG

**3** **DKKB102**  
**F-TEAM EXTENDABLE 2 PAIRS PADDED WHEELED 170/220 CM**  
Capacity/Volume 2 PAIRS  
Size L1700-2200 x W360 x H220 mm  
Weight 3.70 KG

SKI BAGS

**DKIB400**  
**BASIC SKI BAG 185 CM**  
Capacity/Volume 1 PAIR  
Size L1900 x W20 x H320 mm  
Weight 1.20 KG

**DKJB201**  
**SPEEDZONE BASIC SKIBAG 185 CM**  
Capacity/Volume 1 PAIR  
Size L1900 x W20 x H320 mm  
Weight 0.68 KG
